COAST - Connecting academic research and industry through analytical science

Collaborating on demand-driven analytical science

What is COAST?

COAST (Community for Comprehensive Analytical Science and Technology) is an **independent Dutch community** in which academia, industry and technology partners collaborate on **analytical science** questions with clear scientific, industrial and societal relevance. What makes COAST distinctive is the way collaboration is organized: through **Communities of Practice**, members meet concrete themes and shared challenges.

⇒ ***These Communities of Practice create short lines between academic and industrial partners, making it easier to exchange knowledge, identify opportunities, and develop collaboration in an open and practical setting.***

From origin to today

COAST was founded in 2008 within major industrial R&D environments, including DSM, Shell and Unilever, with the ambition to strengthen analytical science, talent and infrastructure in the Netherlands. Over time, COAST has developed into a broader demand-driven network, focused on connecting research excellence to real-world challenges in areas such as circularity, water quality, pharmaceutical innovation, and data-driven analysis.

The COAST network today

COAST currently brings together around 70 member organizations, including universities, universities of applied sciences, industrial partners and instrument and technology suppliers. Within the Communities of Practice, these members work together on relevant themes and questions, from early exploration and knowledge exchange to validation, application and new project development.

What does COAST offer you as a PI?

As a **Principal Investigator at a Dutch university**, participation in COAST offers, among others:

- **Access to an active, interdisciplinary network** of academic and industrial experts
- **Support with consortium building** and alignment with relevant **funding opportunities** (e.g. NWA, PPP)
- Participation in **Communities of Practice** on themes such as circular economy, water, pharma and data-driven analysis (PAT/AI)
- **Enhanced societal and scientific impact**, through better alignment of research with real-world challenges
- **Direct connections to talent** (BSc, MSc, PhD), including opportunities for education and PhD-projects

Our Ref.: YY-###

DD Month YYYY

- A platform for **knowledge sharing, visibility and valorization**, based on co-creation rather than consultancy

In this way, COAST strengthens both your **research agenda** and the translation of academic knowledge to society and industry.

New: individual PI membership

To make participation more flexible and accessible for university researchers, COAST now offers individual membership for Principal Investigators.

Key features:

- Individual PI membership
- Alignment with relevant communities and activities
- Annual membership fee: €250 (excl. taxes)

This approach enables accessible participation that aligns closely with individual research lines.

Interested? Two ways to explore further:

- **Already familiar with COAST and ready to join?**
We are happy to assist you directly with the registration process.
⇒ Please email your joining request to administration@ti-coast.com
- **Would you like to explore first whether COAST fits your research?**
We would be pleased to schedule a short, informal, introductory meeting.
⇒ Please email to management@ti-coast.com

You are also always welcome to **informally attend a Community of Practice event or educational activity**.
